

Computer Literacy

6th Grade Technology

Modern Computers

Digital Devices

Read and process information as a series of individual bits of data rather than as a continuous stream

Digital vs. Analog

- Analog Devices

- Tape recorders

- Televisions

- Work with continuous stream

Personal Computers (PCs)

- Computers used in everyday life
 - At home
 - School
 - Your job
- Windows & Macintosh Computers

Windows vs. Macintosh

- Principal difference
 - the operating system (OS)
- Operating System
 - Software enables computers to run other software and run basic tasks of

Windows vs. Macintosh

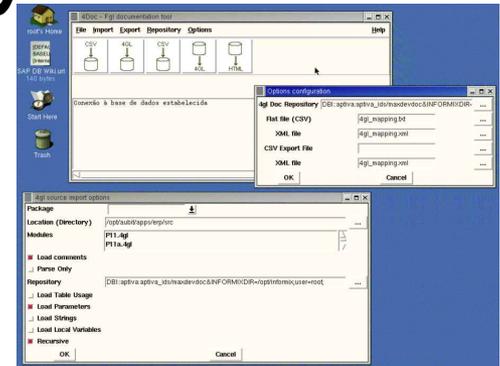

- Windows
 - Microsoft Windows OS
- Macintosh
 - Made only by Apple Computers
 - Use an OS called Mac OS that only runs on Macintosh computers and is different from Windows.

Windows & Macintosh OS

- Systems are not compatible
- They cannot run the same software
- Software may be found now to run in both versions
- Latest:
 - Boot Camp
 - Mac lets you run Windows OS

Different Operating Systems

- Based on GUI system
 - Graphical user interface
 - Software interface
 - Allows user to interact with a piece of software by selecting items from a screen to execute a command rather than typing in commands to perform tasks
 - Easier to use
 - As your working on a document, can see what it looks like before printing it
 - Not true before

Operating Systems are constantly being improved or upgraded as technology advances

2 Most Popular OS Today

Both built around GUIs

- Windows Operating System
 - Windows was developed by Microsoft
 - Windows 98-extension of Windows 95-better at multitasking: running more than one application at the same time.
 - Windows 2000-easier to use
 - Windows XP-business and home versions
 - Windows CE-handheld (PDAs) version
- MAC OS
 - Primary OS for Apple Computers “Macs”
 - iMac desktop PCs
 - PowerBook, iBook laptops
 - Power MacG4 servers
 - Macs favored by artists and designers for their multimedia and graphics capabilities
 - OS 9
 - OS X, OS 10.1.3
 - OS 10.4
 - OS X Tiger
- Cross Platform
 - Ability to run on both types of OSs –Mac and Windows

Operating Systems | OS

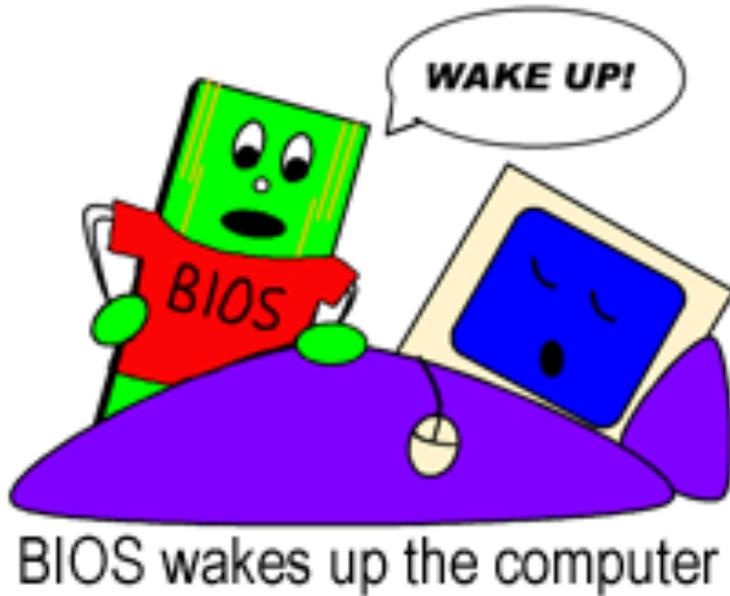

OS tells programs what to do

- Most important program on any computer
- A large program made up of smaller programs
- Controls how CPU communicates with other hardware

CPU (central processing unit)

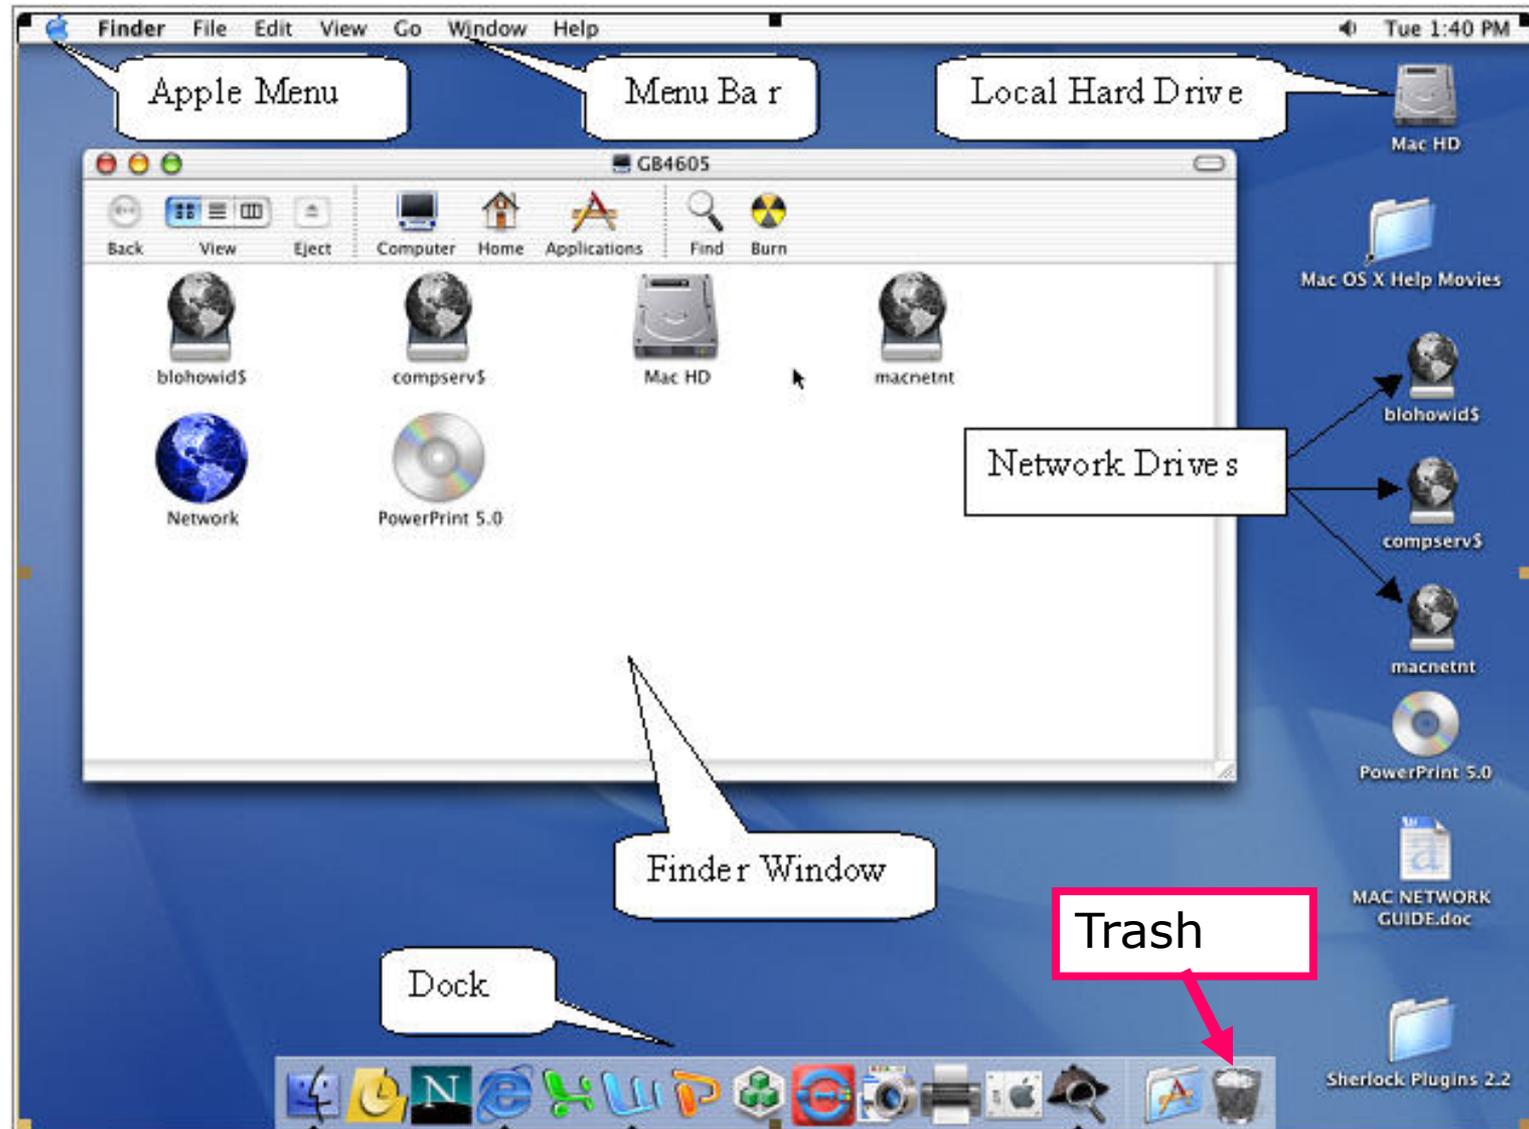

Brain of computer-controls info and tells other parts what to do

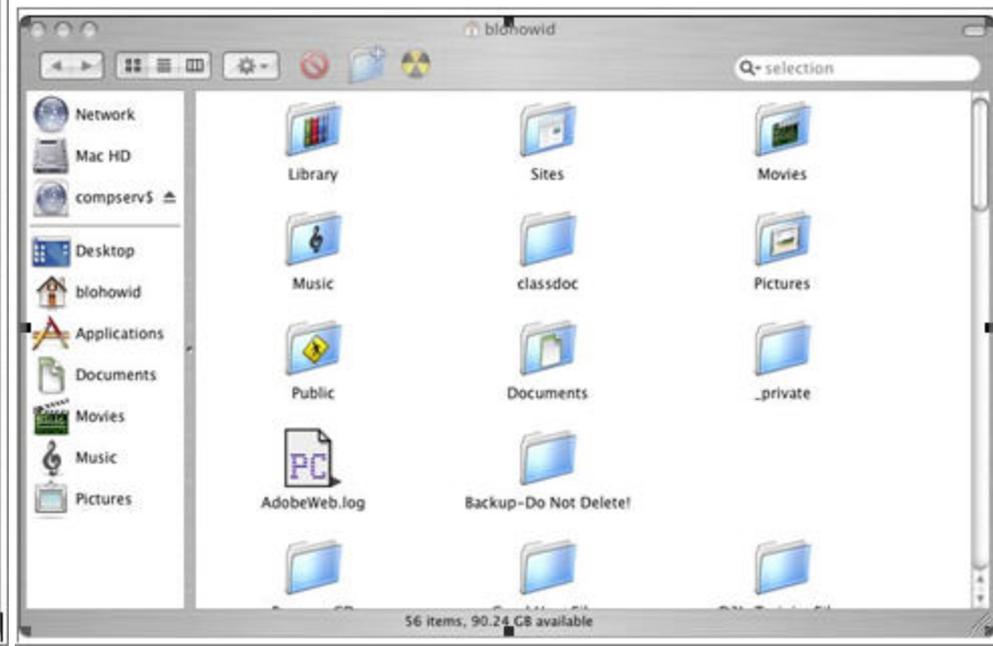

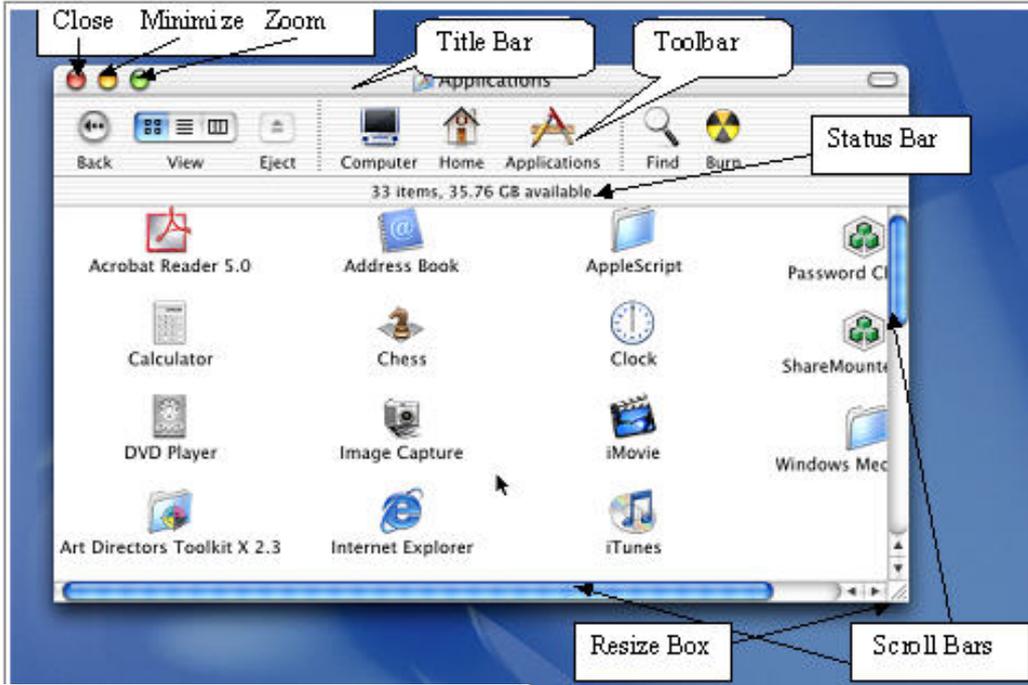

OS continued...

- BIOS-Basic Input Output System
 - Responsible for waking up the computer when you turn it on
 - Reminds it of all the parts it has and what they do.
- DOS-Disk based Operating System
 - OS contains other programs not as important but necessary

Mac Desktop

Windows Desktop

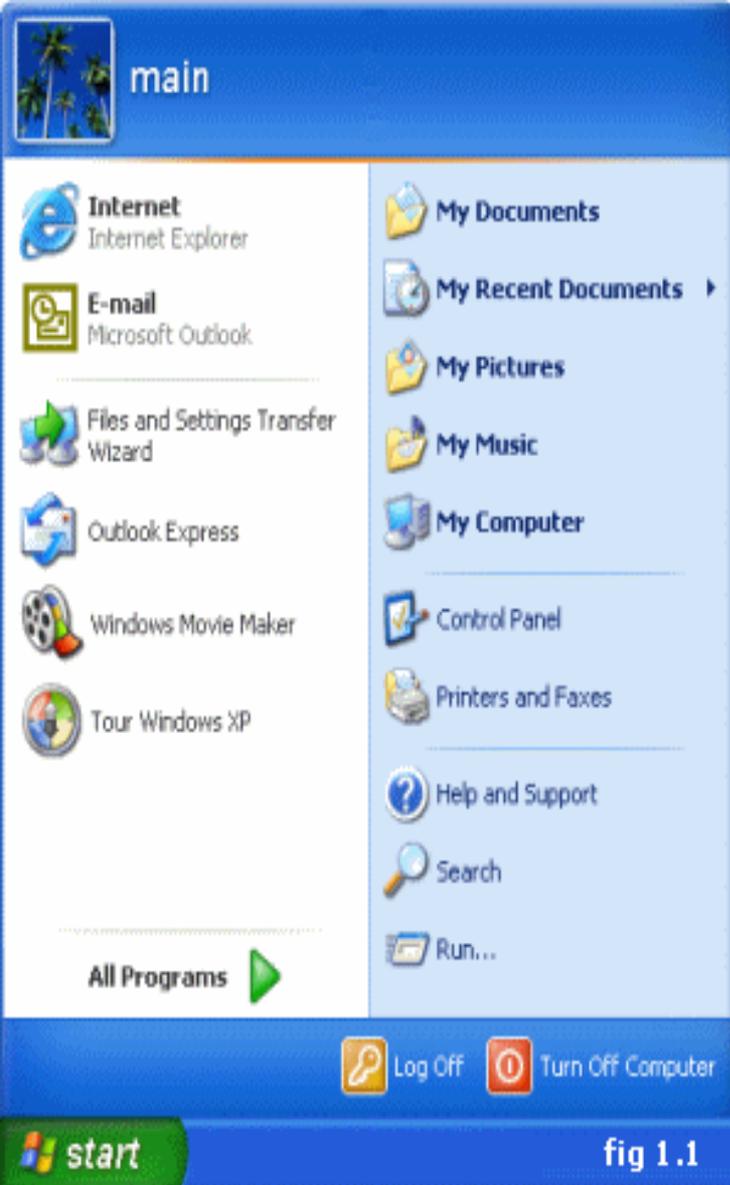

fig 1.1

Log off - Log off the current user.

Turn Off Computer - shutdown, restart and standby.

All Programs - Access installed programs.

Run - Used to manually start executable files (programs).

Search - Search your PC for files and folders.

Help and Support - Opens the built-in help

Control Panel - The control panel is used to configure various Windows XP settings, we will be looking at the Win XP control panel in detail later in the tutorial.

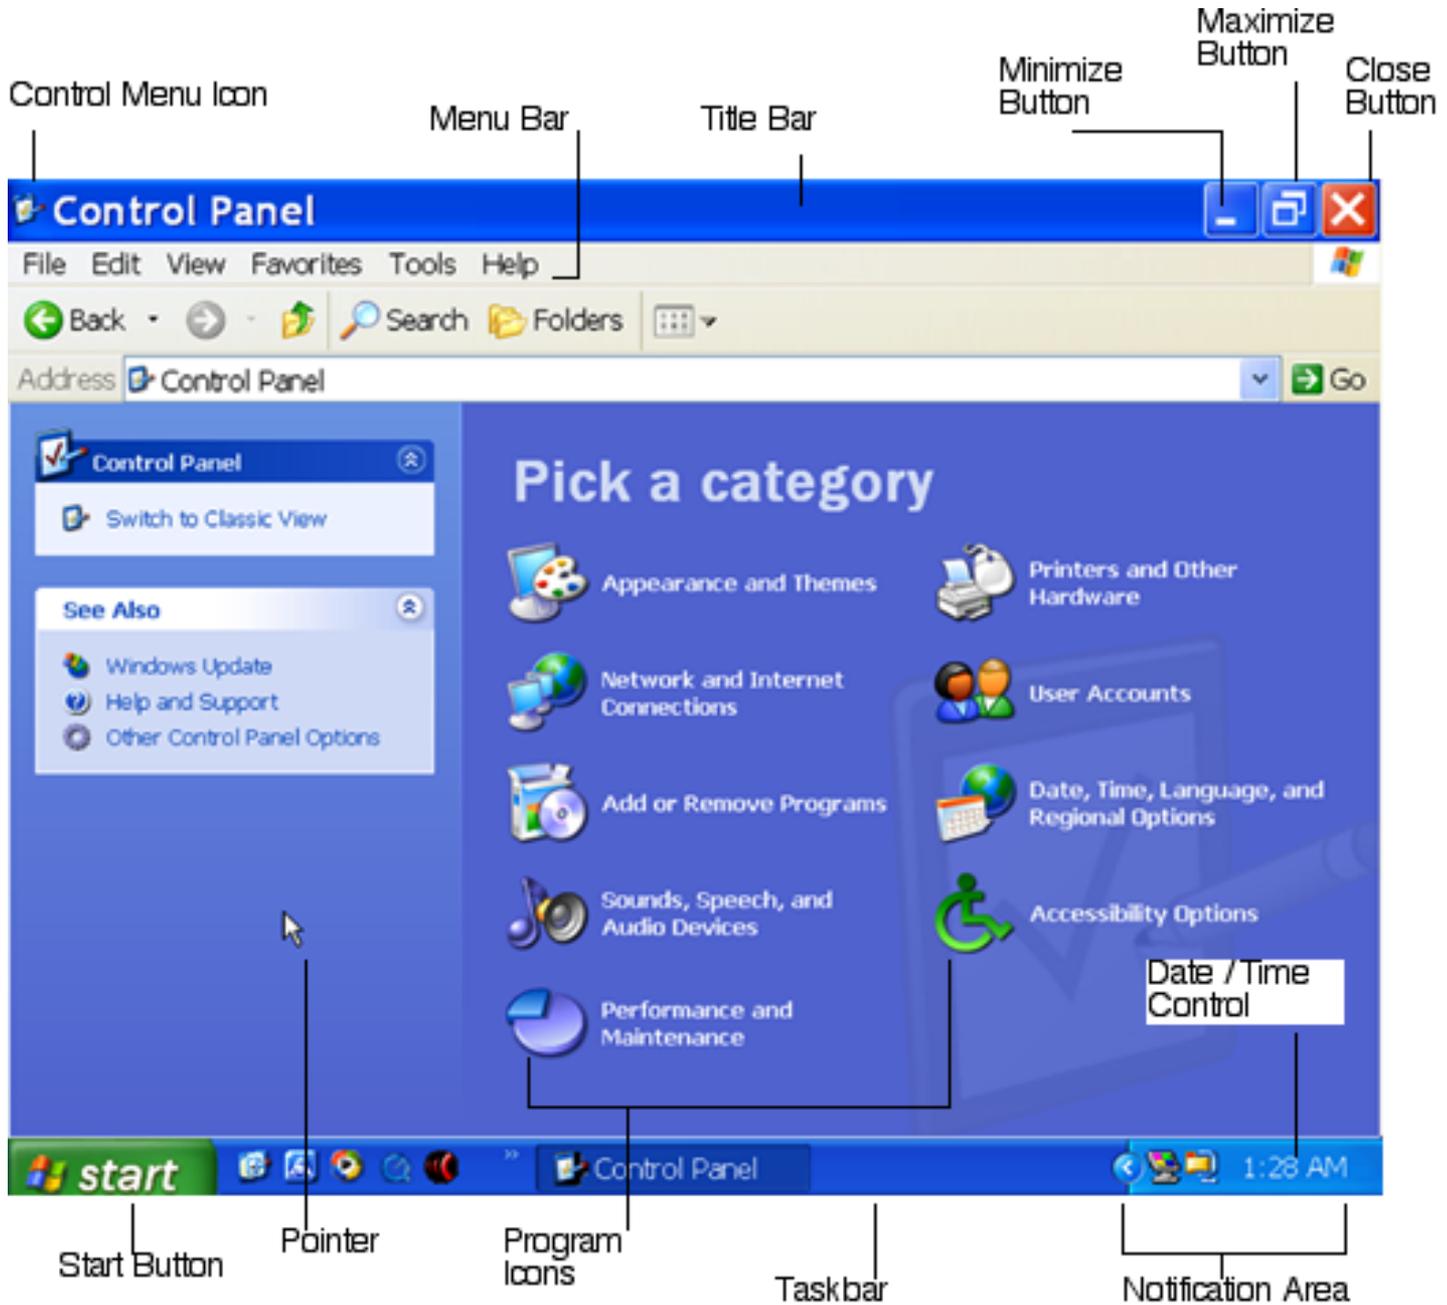

My Computer - Gives you access to your computer's disk drives and files

My Music - Links to a folder which is used (by default) to store any music files on your hard drive.

My Pictures - Links to a folder used (by default) to store any pictures/images on your hard drive.

My Recent Documents - folder contains recently viewed documents.

My Documents - Gives access to a folder which is used (by default) to store any documents on your hard drive.

Desktop vs. Laptop PCs

- Desktop computers
 - Easier to upgrade
 - Designed to be left in one location
 - Can add more memory
 - Full size keyboard
 - Larger monitor

Laptop Computers

- Portable
- Smaller screens
- More powerful before
- Compact keyboard
- Cost more
- Upgrading more difficult

Hand Held Devices (PDAs)

- Computers small enough to hold in your hand
- Personal digital assistants
- Most popular PDAs are made by PalmOne and Blackberry
 - Don't have all features or power of PC
 - Keyboards too small
 - Only type a few words
 - Write w/stylus via a touch screen
 - Can't store large amounts of information

Anyone have a PDA?

What Features?

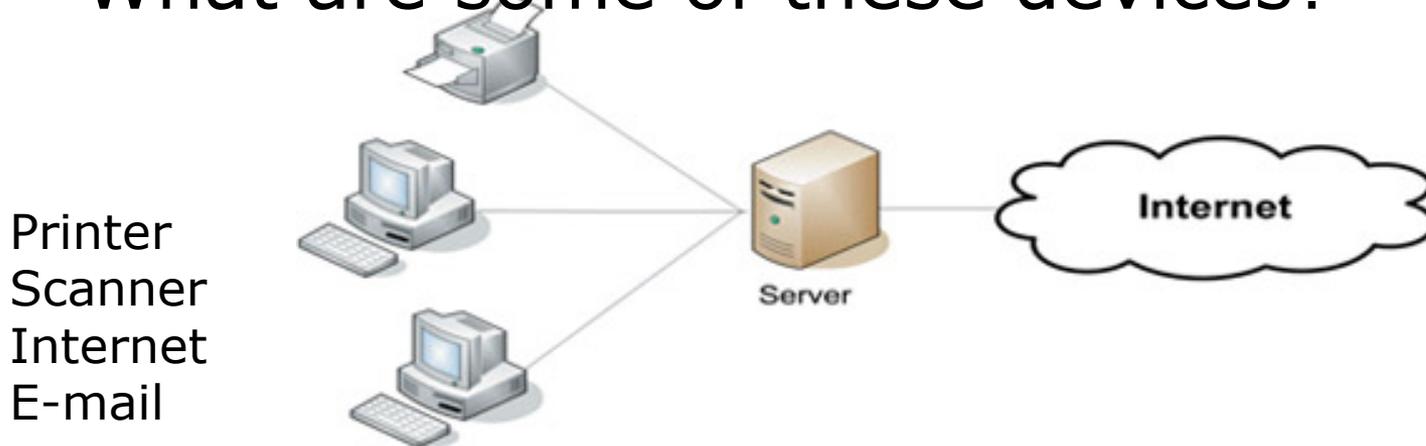

Uses of PDAs

- Appointment calendars
- Address books
- Calculators
- Saving short notes
- Games
- Connect to PC
- Synchronize PDA calendar to update PC's
- PDA has modem-send / receive e-mails
- Connect to WWW
- PDAs and wireless telephones combining features
- Distinction between both may not exist in future
- Future: More powerful storage device

Servers

- A computer that manages files and other resources for a network
- Network: several PCs connected to a single server
- Some servers no bigger than a PC others are much larger and more powerful
- Other devices are also connected to a server so that many people can share them
- What are some of these devices?

Input / Output Devices

6th Grade Technology

Input Devices

- Any info you enter into a computer is input

Name 2 input devices on a PC

keyboard-enter text

mouse- select options

entering commands by selecting
items

Other Input Devices

- Mice
 - Two buttons on Windows PC
 - Single button mouse Mac
- Small wheel helps to scroll
- Right click on Mac = Ctrl key + mouse click
- Trackball
 - Move ball to move cursor
- Trackpoint
 - b/n the G and H keys
 - Found on a laptops keyboard
 - Press and move finger on touchpad to move cursor

- Touchpad
 - Flat, built in pad
 - Press and move finger on touchpad to move cursor

- **Sound Input Devices**

- Record voices or music

- **Microphones**

- Record sounds to create audio files
 - Audio cards enable computer to process sounds

- **Digital recorders**

- Save sounds in a format you can use with computers
 - Handheld devices come w/ cables that connect to computers

- **Synthesizers and Musical Keyboards**

- Create music w/ digital synthesizers
 - Can record music as you play it
 - Able to edit music recording
 - Digital recording edited w/ audio editing software
 - Can be connected to computers by cables

- Digital Still Cameras & Digital Camcorders

- Digital files that can be uploaded to a computer
- Pictures and videos (images and sounds)

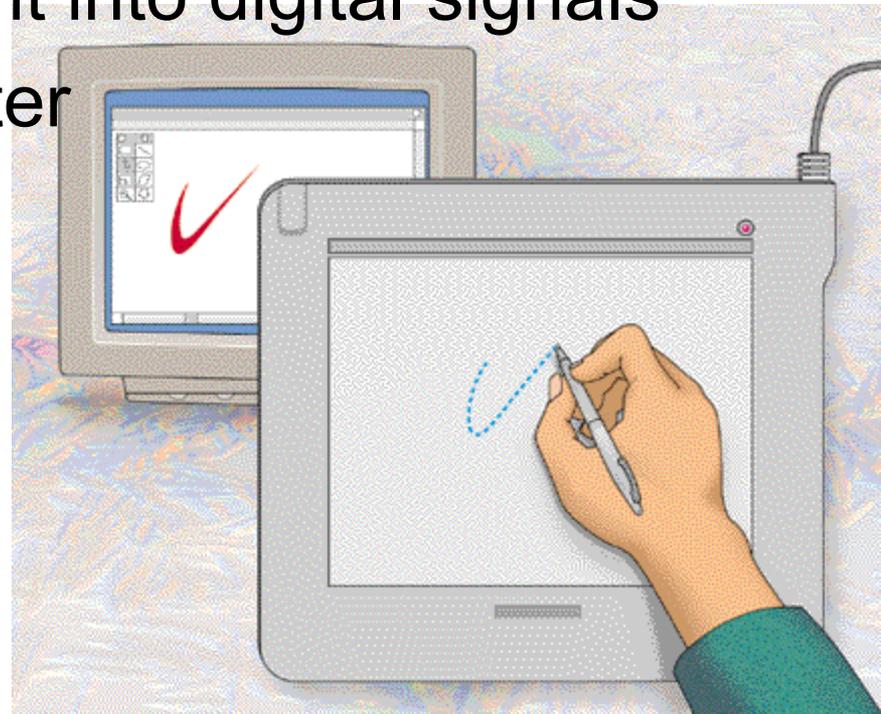

- Web Cams

- Digital video camera connected to the www
- Allow live broadcast over the web
- Quality not as good
- Inexpensive
- Good for teleconferences

- Graphics Tablet
 - “Digitizing tablet” or “digitizer”
 - Create sketches
 - Drawings in digital format
 - Displays on a computer screen
 - Draw on tablet with pointing device
 - Tablet translates movement into digital signals
 - Sends them to the computer

- Scanners

- Converts printed pictures or documents to a digital file that you can upload to a computer

- Game controllers

- Game pads (both hands)

- race car wheels

- Joysticks

- Use them to send instructions to the computer

Output & Display Devices

- Any information a computer produces is called output
- Can see or hear output

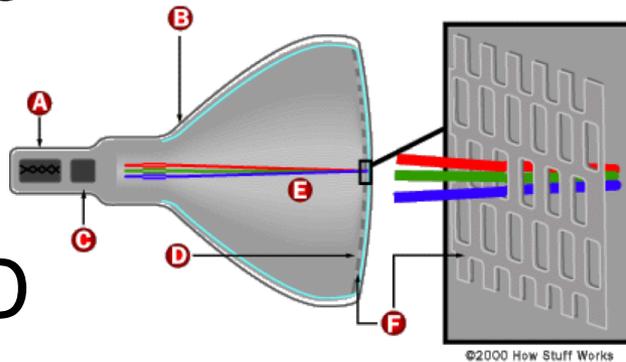

- Monitors -2 most common kinds
 - See text, graphic input
 - Shows you computers output
- CRT
 - Cathode ray tube-desktop computer
- LCD
 - Liquid crystal display-laptops

CRT vs. LCD

- CRT

- Use display technology that beams signals against the back of a screen

A Cathode
B Conductive coating
C Anode

D Phosphor-coated screen
E Electron beams
F Shadow mask

- LCD

- Use technology that displays text and images by passing electricity through a liquid crystal solution sandwiched b/n 2 magnetic sheets

- Touch screens

- Output device, display, and an input device
- Touch an item instead of using keyboard or mouse

Where do you see them?

ATMS

PDA's

Kiosks-purchase tickets, airports, hotels

Interactive computer terminals

- Plasma Display (flat screens)
 - Flat panel display that creates images by passing electrical impulses through a neon/xenon gas mixture sandwiched b/n two sealed glass plates with electrodes on their surfaces
 - High color depth
 - Wide viewing angle

- Projectors
 - Connect to computer to display what's on your computer screen on a wall or screen

- **Printers**

- Produce a hard copy of what is on your computer
- ***Inkjet printer***: spray ink at paper through tiny nozzles
 - Inexpensive
 - Color
 - Produce high quality text and graphics
 - Slower
- ***Lazer printers***: use laser beam and magnetism to transfer fine powder called toner to the paper
 - More expensive
 - Color
 - Print quality better

- **Speakers**

- Most PCs come with speakers
- Allows you to hear sound files
- Laptops: built in
- Desktops: usually detachable

Digital Storage Devices & File/Folders

6th Grade Technology

Storage Devices

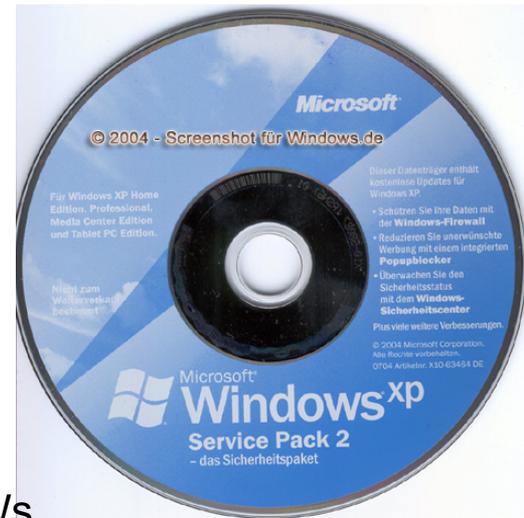

- Important for saving and storing software you use
- Help to provide a means for saving your work
- Save frequently
- Some devices are built in
- Others are removable- mobility
- All computers have a hard drive (hard disk)
 - Built in for storing software and information
 - Has a disk that spins and stores data magnetically
 - Not recommended to save work on the computer
 - Cannot access it throughout the building

- Portable hard drives
 - Helps to store files that can be used on more than one computer-external hard drive, carts
- Removable Storage Disks
 - Computers come with drives that can read and write information from removable disks
 - What are some of these disks?
 - Cd roms
 - DVDs
 - Floppy disks
 - Flash drives
 - Why would you save or store files on these kinds of disks?
 - Save space on hard drive of computer
 - Take home
 - Keep for future use
 - Use on any computer

- CDs (compact disks)
 - Software and music is sold on CDs
 - CD Rom (compact disc-read only memory)
 - Computers can read data from them
 - Cannot write to them
 - Why?
 - What do you need to be able to write a CD? (cd burner and its software)
 - Your drive needs to be able to write to cds
 - Large capacity – more storage space = 433 floppy disks
 - CD R
 - Can only write data once
 - Software and music publishers use them
 - Cannot erase the material
 - CD RW (compact disc -read / write)
 - Stores data
 - Erases it
 - Replaces it with new data
 - Sometimes called “erasable” or “rewritable” cds
 - Replacing a file on it erases the entire disk
 - CD RW drives can write to both CD-R and CD RWs

- DVDs (digital video disks)

- Optical disks- more space than a CD ROM

- 3 kinds:

- DVD ROM: digital video disk read-only

- Memory –can only read data on disk

- DVD Rs and DVD +R (DVD recordable)

- Can record data on to the disk

- DVD RW and DVD1RWs (DVD rewritable)

- Can record and rerecord to the disk many times

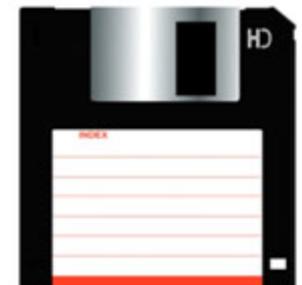

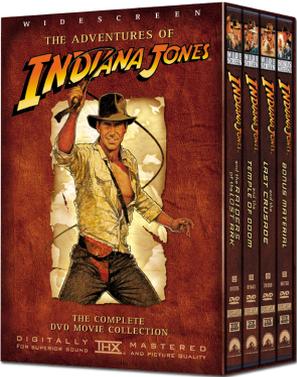

- Floppy Disks-replaced by CDs (floppies)

- Flexible magnetic disk which is sealed in a plastic casing

- Still found on PCs since customers may have old data still stored on them

- Convenient for backing up

- Storing and transporting small files

- Memory Cards

- Cameras and audio recorders use them for storage.

- Take a lot of pictures-use memory card for the rest

Files and Folders

- You can do lots of things with files:
 - Create them
 - Rename them
 - Save them
 - Or delete them
- Common File Extensions:

.cwk (Appleworks)	.doc (Microsoft Word)
.jpg(Photo)	.gif (graphic/animation)
.htm/.html (webpage)	.pdf (Acrobat/Adobe)
.xls(Excel spreadsheet)	.ppt (PowerPoint)
.mp3 (Sound file)	.aif/.aiff (Sound file)
.wav (Sound file)	.mov (movie file) .avi (audio/video file)
.zip/.sit/.hqx(compressed file reduced in size)	

File Address

- A file's address always includes:

Drive\Folder (s)\File name

MacintoshHD:\Users\Adam\stories\AlienTapDancing.txt

DPME_Students:\6Maroon\smithj\technology\techpoem.doc
